Occupational therapy (OT) is a client-centered health profession that focuses on enabling individuals to engage in meaningful activities of daily living. OT practitioners work with clients to promote health and well-being through the therapeutic use of everyday activities. The scope of occupational therapy is broad, encompassing areas such as physical rehabilitation, mental health support, pediatric therapy, and geriatric care. As the demand for specialized services grows, practitioners are continually adapting their skills and knowledge to meet emerging needs.

In 2022, the landscape of occupational therapy has shifted, with new areas of practice emerging to address contemporary challenges faced by various populations. This evolution reflects a growing recognition of the importance of holistic and integrative approaches in health care.

Telehealth in Occupational Therapy
