- Potting soil
- Pots or containers
- Water
- Light source

Procedure:

1. Plant seeds in pots with soil.
2. Set up different groups with varying conditions (e.g., light vs. dark, different amounts of water).
3. Observe growth over time and record measurements.

Expected Outcomes: Students will learn about the requirements for plant growth and how environmental factors influence it.

2. Simple Chemical Reactions

Objective: To observe a chemical reaction between baking soda and vinegar.

Materials Needed:

- Baking soda
- Vinegar
- A clear container
- Food coloring (optional)

Procedure:

1. Place baking soda in the container.
2. Add vinegar slowly and observe the reaction.
3. Optionally, add food coloring to see the effects more clearly.

Expected Outcomes: Students will witness an acid-base reaction and learn about chemical properties and changes.

3. Exploring Forces with Balloon Rockets

Objective: To demonstrate the principles of force and motion.

Materials Needed:

- Balloons
- String
- Straw
- Tape

Procedure:

1. Thread a straw onto a long string and secure the string between two points.
2. Inflate a balloon without tying it, and tape it to the straw.
3. Release the balloon and observe its movement along the string.
