History of the Blue Ridge Parkway

The Blue Ridge Parkway was conceived in the early 20th century as a means to connect the Great Smoky Mountains National Park in North Carolina to Shenandoah National Park in Virginia. The idea was to create a scenic roadway that would showcase the natural beauty of the Appalachian Mountains while also providing access to the region's rich cultural heritage. The Parkway was authorized in 1936, and construction began shortly thereafter, driven by the New Deal programs which aimed to provide jobs during the Great Depression.

Throughout its development, the Blue Ridge Parkway faced numerous challenges, including difficult terrain and limited funding. Despite these obstacles, workers utilized innovative construction techniques to ensure the road was built to withstand the elements while minimizing impact on the surrounding environment. The Parkway officially opened in 1939, and it has since become one of the most visited national park units in the United States.

Today, the Blue Ridge Parkway is celebrated not only for its stunning vistas but also for its historical significance. The area's rich cultural history includes Native American heritage, early European settlement, and the vibrant Appalachian culture that continues to thrive. Visitors can explore numerous historical sites, including old homesteads, traditional music venues, and craft shops that showcase local artisanship.
