Overview of Hayward SP714 Sand Filter

The Hayward SP714 sand filter is a popular choice among pool owners due to its robust design and efficient filtration capabilities. This sand filter is engineered to provide superior water clarity and circulation, which is essential for maintaining a healthy swimming environment. The SP714 model is specifically designed for above-ground pools and is capable of filtering water at rates that cater to various pool sizes.

Key Features

The Hayward SP714 boasts several features that enhance its functionality and convenience:

- **Durable Construction:** Made from high-quality materials that resist corrosion and UV damage.

- **Efficient Filtration:** Equipped with a large sand capacity that allows for better dirt and debris removal.
- **Easy Operation:** Comes with a user-friendly multiport valve for simple control of all filter functions.
- **Versatile Compatibility:** Suitable for various pool types, making it a versatile option for many pool owners.
- **Low Maintenance:** Designed for easy maintenance, reducing the time and effort required for upkeep.

Installation Guidelines

Proper installation of the Hayward SP714 sand filter is vital for ensuring optimal performance. The installation process requires careful planning and attention to detail. Below are the steps to follow for a successful installation:

Preparation

Before starting the installation, ensure you have all necessary tools and materials, which may include:

- Sand filter
- Sand (usually 20 silica sand)
- Plumbing fittings and PVC pipes
- Multimeter or water level
- Wrenches and screwdrivers

Installation Steps

Follow these steps for the correct installation of the Hayward SP714 sand filter:

1. Choose a level location near the pool pump and ensure proper drainage.

2. Install the filter base securely on the ground.
3. Connect the filter to the pool's return line using appropriate plumbing fittings.
4. Fill the filter tank with the correct amount of sand.
5. Attach the multiport valve to the filter and connect the pump.
6. Check all connections for tightness and leaks.

Operational Instructions

Once installed, understanding how to operate the Hayward SP714 sand filter is essential for effective water filtration. The multiport valve plays a crucial role in directing the flow of water through the filter.

Multiport Valve Functions

The multiport valve has several settings that control the operation of the filter. Familiarize yourself with these settings:

- **Filter:** Regular filtration of pool water.
- **Backwash:** Cleans the filter by reversing the flow of water, removing trapped debris.
- **Rinse:** Cleans the waste line after backwashing.
- **Waste:** Bypasses the filter for draining water.
- **Closed:** Stops the flow of water to the filter.

Starting the Filter

To start the filter, follow these steps:

1. Set the multiport valve to the "Filter" position.
2. Turn on the pump and check for any leaks.

3. Monitor the pressure gauge; normal operating pressure should be noted.

Maintenance and Cleaning

Regular maintenance of the Hayward SP714 sand filter is critical to ensure its longevity and performance. Establishing a routine maintenance schedule will help keep the filter functioning efficiently.

Regular Maintenance Tasks

Perform the following maintenance tasks regularly:

- Check and clean the skimmer and pump basket weekly.
- Backwash the filter when the pressure gauge indicates a rise of 8-10 psi above the normal operating level.
- Replace the sand every 3-5 years, depending on usage and water quality.
- Inspect the multiport valve for wear and tear periodically.

Deep Cleaning Procedures

In addition to regular maintenance, deep cleaning is essential to maintain the filter's efficiency:

1. Backwash the filter thoroughly to remove dirt and debris.
2. Once backwashed, set the valve to "Rinse" for a few seconds.
3. After rinsing, return the valve to the "Filter" position and resume normal operation.

Troubleshooting Common Issues

Even well-maintained filters can encounter issues. Understanding how to troubleshoot common

problems can save time and money. Here are some frequent issues and their solutions:

Low Water Flow

If you notice a decrease in water flow, consider the following:

- Check for clogs in the skimmer or pump basket.
- Inspect the sand filter for buildup; backwash if necessary.
- Ensure that the multiport valve is set correctly.

Increased Pressure

Increased pressure on the gauge may indicate:

- A clogged filter that requires backwashing.
- Dirty or damaged sand that needs replacement.

Frequently Asked Questions

Q: What type of sand should I use in my Hayward SP714 sand filter?

A: You should use 20 silica sand, which is specifically designed for sand filters. It is important to use the correct grade to ensure optimal filtration.

Q: How often should I backwash my Hayward SP714 sand filter?

A: Backwash your filter when the pressure gauge indicates an increase of 8-10 psi above the normal operating level, or typically every 4-6 weeks depending on pool usage.

Q: Can I use a Hayward SP714 sand filter for an in-ground pool?

A: The Hayward SP714 is primarily designed for above-ground pools. For in-ground pools, consider using a model specifically rated for such applications.

Q: How do I know when to replace the sand in my filter?

A: Sand should be replaced every 3-5 years, or sooner if you notice a decrease in filtration efficiency or if the sand appears worn or clumped.

Q: What should I do if my filter is leaking water?

A: Check all connections and seals for tightness. If leaks persist, inspect the multiport valve and the tank for cracks or damage that may require repair or replacement.
