Common IF8728 Challenge Questions and Answers

Now that we've outlined strategies for solving the IF8728 challenge, let's delve into some common questions that participants often face, along with their answers.

1. Logic Puzzle Example

Question: You have three boxes labeled "Apples," "Oranges," and "Apples & Oranges." Each box is labeled incorrectly. You can only take one fruit from one box. How do you determine the correct labels?

Answer:

- Take a fruit from the box labeled "Apples & Oranges." Since it is labeled incorrectly, it can only contain either apples or oranges.
- If you pull out an apple, then this box must be the "Apples" box. Therefore, the box labeled "Oranges" must be "Apples & Oranges," and the box labeled "Apples" must be "Oranges."
- Conversely, if you pull out an orange, the reverse is true.

2. Mathematical Problem Example

Question: If a train leaves a station traveling at 60 mph and another train leaves the same station 30 minutes later traveling at 90 mph, when will the second train catch up to the first?

Answer:

- The first train travels for 0.5 hours before the second train starts, covering a distance of 30 miles (60 mph 0.5 hours).
- The speed difference between the two trains is 30 mph (90 mph - 60 mph).
- To catch up, the second train needs to cover the 30 miles at a speed of 30 mph, which will take 1 hour.
- Therefore, the second train will catch up to the first train 1 hour after it departs.

3. Wordplay Example

Question: I speak without a mouth and hear without ears. I have no body, but I come alive with the wind. What am I?

Answer: An echo. This riddle plays with the concept of sound and perception, emphasizing the idea that an echo is created by sound waves bouncing off surfaces.

4. Visual Riddle Example

Question: You see a series of shapes: a triangle, a square, and a pentagon. The triangle has 3 sides, the square has 4 sides, and the pentagon has 5 sides. What shape comes next in the series?

Answer: A hexagon. The pattern follows a sequence where each shape has one more side than the previous shape.
