Deck and Blade Maintenance

The cutting deck and blades are directly responsible for the quality of your turf. The manual outlines how to inspect the mower blades for nicks, bends, or excessive wear. It provides instructions on proper blade sharpening techniques to maintain a clean cut, which is essential for turf health and appearance. Furthermore, it details how to balance the blades after sharpening to prevent excessive vibration, which can damage the deck and other mower components. Problems with the belt drive system to the deck could also be a cause, and the manual will outline checks for belt tension and condition.

Transmission and Drive System Problems

Issues with the mower's forward or reverse movement, or unusual noises from the drive system, can be addressed with the help of the troubleshooting guide.
